

## **Postdoc position available at CRISMAT Laboratory (Caen, France)**

Subject: Development of oxide thermoelectric materials

The CRISMAT laboratory offers a postdoc position concerning the development of oxide thermoelectric materials.

This position is awarded for 12 months renewable. It would ideally begin in October 2012.

This position will involve oxide material synthesis, structural and chemical characterization, and transport properties measurements.

Applicants should have a recent PhD with a strong background in materials science, solid-state chemistry or physics. Experience in solid state synthesis, sintering (conventional and SPS), would be an advantage.

English or French should be fluently spoken.

Interested applicants should send by email CV, motivation letter and recommendation letters to:

Emmanuel Guilmeau
